

Release the Power of Real World Studies with Cmed

Proven Scalability and Real World Expertise

Cmed is a trusted data expert for large and complex projects. With 180 Data and Analytics staff, 20+ years of experience, and hundreds of trials managed to date, we deliver flexible partnering solutions.

Advanced Technology

We use encapsia to support complex design requirements such as country adaptations, large searchable data tables, graphical displays directly integrated on eCRFs, dynamic enrollments, visit templates, and seamless mid-study changes. All your study data is at your fingertips in real time.

Why Cmed and encapsia were chosen for a 15,000 patient, global oncology registry study

- Our experience and success in delivering large projects in real world settings
- Vast scalability of encapsia
- Aggregation of data from multiple sources and a different formats within a single interface
- Powerful analytics for data scientists and medical teams to drill down into the data
- Project management methodology ensures timelines are met across multiple stakeholders
- Excellent reputation: our reference clients rated us as highly collaborative, flexible, and accountable

- Disease registries
- Interventional and non-interventional studies
- Prospective and retrospective designs
- Expanded and Early Access Programs (EAPs)
- PASS (Post Authorization Safety Studies)

Remote & Central Data Monitoring

Our central data monitoring teams are adapted for today's real world of remote reviews of data, metrics reporting, and status trackers for an integrated approach to the management of your data.

Impact

Quality is a given. Our approach combines efficient processes guided by long-term experience. We use technology to minimize risk and enable you to comply with data integrity requirements.
